

landcover modification tool

Posted by danberado - 2009/03/04 23:08

Hello,

When I attempted to alter the landcover of four individual patches via the polygon selection method, it also slightly altered the entire NALC grid, is this supposed to happen or was it an error?

It happened when I was using the AGWA 2 build I downloaded last spring.

Can you describe how the rest of the GRID was altered? I suppose the cell alignment can potentially be shifted from the source GRID but other than that there shouldn't be any undirected changes to the new GRID.
